

WinTool WebApp

Version 1.0

With tablet & smartphone mobile, be smart throughout the shop floor

With the Mobile Web Application from WinTool, all reports such as setup lists or evaluations can be displayed via tablet or smartphone. The digital NC folders are thus accessible to all machine operators and NC programs can be conveniently loaded and returned. All orders are clearly displayed per machine with status information. All rotating tools are shown with allocation and life time information. In addition, components, tool assemblies and tool lists can be conveniently booked on the go.

Features

Tool information

- All reports in WinTool can be called via mobile (paperless and in real-time).

Digital NC-Folders

- The NC folders are displayed 1:1 out of WinTool in mobile. All files are therefore available for mobile use.
- In addition, photos can be taken, which are stored directly in the respective NC folder
- The NC programs can thus be managed on the machine.

Job tracking

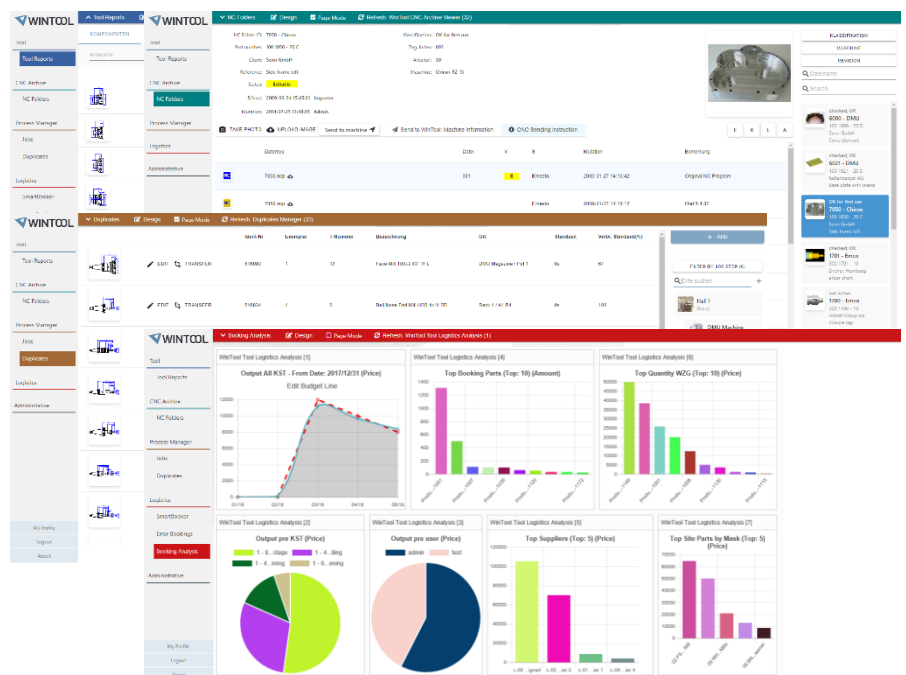

- All orders are displayed clearly with status information per machine and in real time.
- All rotating tools are clearly displayed with allocation and life time information.

Logistics

- Components, tool assemblies or tool lists can be booked on the go (also with scanner).
- Consumption analysis via cost centers or users as well as Top 10 Analyses are standard.

Requirements

- WinTool 2020 Installed
- Microsoft SQL 2012 or above
- .NET Framework 4.7.1 or above

The Task

- Make tool information available fast, smart and mobile (everywhere)
- NC folders and their files – e.g. clamping plans, but primarily NC programs, can be accessed directly by the machine operator
- Show all jobs and tool duplicates with all status information in real time
- Bookings in WinTool via touchscreen are even easier and more integrated

Your Benefit

- Maximize efficiency as all tools and resource information is paperless, mobile (throughout the entire company), viewable and able to be evaluated in real time
- The machine operator can access all information related to jobs and tools directly on the machine (such as a tablet) and trade NC programs, items (in terms of tool life) and production status (start / end), what is extremely time saving.
- Bookings can be more productive, mobile & smart via touchscreen and scanner

WinTool WebApp

Version 1.0

Changes

1.1.0

- New possibility to set a Name on Pictures (CNC Archive)
- For simplicity the Login page now remembers the Username and autofill it
- Various optimizations

1.0.5

- Various optimizations
- Compatible with WinTool 2020.3

1.0.4

- Various optimizations

1.0.3

- Compatible with WinTool 2020.2
